📁 My Portfolio

PROFILE

Full-stack developer with hands-on experience shipping web and AI-backed products, blockchain integrations, and data-driven systems. Comfortable owning features end-to-end: API design, authentication, databases, cloud storage, and deployment pipelines. Currently focused on AI-native UX (streaming responses, tool use, guardrails), Web3 clients (MetaMask, testnets), and production-quality Next.js applications. Open to full-time roles, internships, and selective freelance engagements where impact is measurable.

TECHNICAL SKILLS

- Languages & runtimes: TypeScript, JavaScript, Python, Java, C, SQL, HTML/CSS, Solidity, Dart (Flutter exposure).
- Web & APIs: Next.js, React, Vite, Tailwind CSS, Django, Django REST Framework, Flask, Express.js, Node.js, REST design, session- and JWT-style auth patterns.
- Data & persistence: PostgreSQL, MySQL, MongoDB, Supabase (Auth, RLS-aware clients), ORM/query modeling, file uploads to object storage (e.g. AWS S3).
- AI / LLM tooling: OpenAI API, Groq, Gemini-oriented workflows, prompt engineering, retrieval-style patterns, streaming-first UIs (portfolio mirrors Vercel AI SDK-style flows).
- Blockchain & Web3: Ethereum/Sepolia testnets, MetaMask, ethers.js, contract-aware frontends, auction- and provenance-style dApp architecture.
- DevOps & quality: Git/GitHub, Docker, CI/CD collaboration (pipelines, regression automation), unit/integration testing, Playwright/Selenium familiarity.

EXPERIENCE

Nokia

R&D Engineer Intern

July 2025 — Present

Bengaluru (On-site) — OHUB

- Contribute to the OHUB initiative as part of R&D: backend services, internal APIs, and integration points with existing Nokia platform tooling.
- Build and maintain automation for build systems and regression checks; shorten feedback loops for quality and release readiness.
- Unit and integration testing, structured test data for reproduction, and CI/CD pipeline hygiene alongside platform teams.

Personal projects

2023 — Present

- Shipped 13+ public repositories spanning Next.js, Django, Solidity, Flask, and AI APIs—from blockchain supply chains to Groq-powered knowledge bases.
- MediTrustChain: pharmaceutical traceability stack (web + contracts + mobile) with emphasis on provenance and monitoring; DeFi-Homes: on-chain property bidding UX with wallet flows.
- KNOWLEDGE-BASE & AI-GRAMMAR: practical LLM integrations (auth, persistence, streaming-friendly UI patterns) aligned with modern full-stack practice.

PROJECTS

Primary code host: github.com/PRAJWAL-BR-0304

MediTrustChain

Next.js, TypeScript, Solidity (Sepolia), Supabase, Flutter; traceability, anomaly detection, GPS-aware flows.

- Blockchain-based pharmaceutical supply chain with real-time traceability and AI-assisted anomaly detection to strengthen provenance narratives.
- Multi-surface delivery (web + Flutter) with managed backend/auth patterns suitable for regulated, audit-friendly workflows.

DeFi-Homes

React, Vite, TypeScript, Tailwind, Supabase, MetaMask, ethers.js, Chart.js, Framer Motion.

- Decentralized real-estate auction experience: wallet onboarding, on-chain bidding metaphors, and transparent market visualization.
- Bridges traditional property discovery with Web3 mechanics while keeping off-chain profile/listing data coherent in Supabase.

[eden-thought](#) Django, PostgreSQL, AWS S3, HTML/CSS/JS, Render-oriented deploy.

- Secure journaling platform with authentication, full CRUD for thoughts, and profile media uploads to object storage.
- Production-minded configuration for cloud databases and deployment templates suitable for hobby-to-demo scale traffic.

[KNOWLEDGE-BASE](#) React, Vite, TypeScript, Supabase, Groq; Markdown rendering.

- Knowledge management with Supabase authentication and Groq-backed generation to produce and render Markdown pages on demand.
- Demonstrates practical RAG-adjacent UX: fast iteration loops, clear loading states, and server-brokered model access.

[AI-GRAMMAR](#) Node.js, Express, EJS, Bootstrap, OpenAI (GPT-4o-mini).

- Paste-in grammar correction workflow with server-side API usage patterns and a clean, form-driven UI.
- Useful baseline for comparing prompt strategies and safe-by-default key handling in small apps.

[Student-Management-System](#) Django 5, RBAC dashboards, attendance, leave, notifications.

- Role-based portals for Admin, HOD, Staff, and Students with cohesive navigation and domain-specific workflows.
- Exercises realistic school operations modeling beyond toy CRUD examples.

[AuriVerify](#)  Next.js 15, FastAPI, scikit-learn, Computer Vision; density + vision + streak multi-signal fusion.

- Multi-signal gold authenticity checker that fuses density physics, vision anomaly detection, and touchstone-streak analysis to expose tungsten-cored and gold-plated fakes.
- Explainable GENUINE / SUSPICIOUS / LIKELY-SPURIOUS verdict with ranked reasons; optional DINOv2 vision scorer for real-image robustness.

Publications

- MediTrustChain — Blockchain-Based Pharmaceutical Supply Chain Traceability with AI-Assisted Anomaly Detection. ICAISE 2026, Springer Nature proceedings (published)—on-chain provenance, monitoring, and AI-assisted anomaly signals for safer supply chains. [Publisher listing](#)
- DefiHomes — A Decentralized Real Estate Auction Platform with Transparent On-Chain Bidding. ICDMIS 2025, Springer Nature LNNS (published)—smart-contract-centric bidding, escrow-style flows, and auditable histories for property markets. [Publisher listing](#)
- Smart Cradle — Secured Assistance and Monitoring System for Babies Using IoT. IEEE conference publication—sensor-driven infant monitoring with connectivity patterns suited to caregiver alerting. [IEEE Xplore](#)

EDUCATION

 **DAYANANDA SAGAR UNIVERSITY** Bengaluru

B.E. Computer Science & Engineering — 2022–2026 (expected)

CGPA: 8.91/10

[🔗 Explore Education](#)

CERTIFICATIONS

- Generative AI & LLM Bootcamp — Udemy (Feb 2025): transformers intuition, prompting, RAG, tool use, and small shipped LLM apps (32h).
- Django 5 Full Stack Masterclass — Udemy (Apr 2025): models, DRF, auth, PostgreSQL, testing, deployment patterns (22h).
- The Complete Prompt Engineering Bootcamp — Udemy (Jan 2025): structured prompts, guardrails, evaluation, automation patterns (14.5h).
- Google Cloud & Firebase — Jun 2025: IAM basics, Firestore modeling, Firebase Auth/Hosting, Cloud Run-oriented full-stack patterns.
- Amazon Bedrock & Strands Agents SDK — Jul 2025: agentic workflows, tool calling, session memory, observability on AWS training track.
- IBM SkillsBuild — AI Fundamentals — Dec 2024: ethics/terminology, supervised learning intro, responsible AI framing.
- Infosys Springboard — Full Stack Development — May 2025: frontend components/routing/state with backend API integration and validation.

Languages

- English (professional), Kannada, Hindi, Telugu.
